SDG	Smart Dubai Government

## 1 Introduction

---

This document describes the “Happiness Index Vote Inquiry” Web Service specification designed to allow Service Providers to inquire about the Happiness Index vote based on multiple filters with Dubai Smart Government Happiness Index Calculator and Dashboard System.

The Audience of this document is those who want to integrate with “Happiness Index Vote Inquiry” Web Service using SOAP standards, this document describes the operations available and what should be the input and output parameters when invoking these operations

### 1.1 Purpose

This guide is written for Government Entities that want to integrate with Happiness Index Calculator and Dashboard System to inquire the level of happiness and satisfaction of end users towards Government Services provided through different sessions

### 1.2 Scope

The scope of this document is to explain the various operations of the “Happiness Index Vote Inquiry” Web Service.

This document does not guide the developer how to create Web Service Client or which client technology to use, it is free for the developer to select the appropriate technology to create the client which will be communicating with the SOAP Web Service

## 2 Webservice Operations

---

This section will list the operations available by the Happiness Index Vote Inquiry Web Service

**Note:** All the search operations either have filter to search the votes on a particular date or between a particular dates ranges, if the date related search filters are used. The date search filter i.e. ‘date’, ‘fromDate’, ‘toDate’ are optional but we have added below restrictions as per new release in order to avoid fetching of huge number of votes from the web service single call.

1. The services are restricted to fetch the votes for maximum of one day.
2. The search parameters ‘date’, ‘fromDate’ and ‘toDate’ are used as below:
  - a. If ‘date’ parameter passed in the request then there is no need to pass ‘fromDate’ and ‘toDate’.
  - b. If ‘fromDate’ and ‘toDate’ passed in the request then there is no need to pass ‘date’ parameter.
  - c. If none of the date search parameters (i.e. ‘date’, ‘fromDate’, ‘toDate’) passed in the request then the operation will fetch the vote’s result of the current day.
3. In case you want to fetch the votes of a particular day, you need to pass ‘date’ parameter with the date value for the required day.
4. In order to fetch multiple days record the service needs to be called one by one for each day.

5. The date range between 'fromDate' and 'toDate' should also be not more than 1 day.

## 2.1 getVotesByApplication

This operation is used to fetch the list of all the Happiness Index votes for the application based search parameters

### 2.1.1 Input Parameters

Tag Name	Type	Length	Description
<b>getVotesByApplication</b>	<b>Object</b>	<b>1</b>	<b>Wrap Request Information</b>
applicationId	String	50	String represents the the application ID
applicationType	String	25	String represents the type of Application based on lookup values e.g. SMARTAPP, WEBAPP, DESKTOP etc.
applicationPlatform	String	50	String represents the platform of Application based on lookup values e.g. BLACKBERRY, WINDOWS, ANDROID etc.
Result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
Date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS

### 2.1.2 Sample Request

```

### 2.1.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>happinessInqByAppResponse</b>	<b>Object</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
Vote	Array of Vote Object	N/A	Represent the array if vote objects
Type	String	50	Represents the Type of Vote
applicationId	String	50	String represents the the application ID

applicationType	String	25	String represents the type of Application based on lookup values e.g. SMARTAPP, WEBAPP, DESKTOP etc.
applicationPlatform	String	50	String represents the platform of Application based on lookup values e.g. BLACKBERRY, WINDOWS, ANDROID etc.
applicationUrl	String	N/A	String representing the URL of the Application
applicationVersion	String	N/A	Version of the application (If any)
userSource	String	25	String represents the source of the end user. For e.g. MYID, LOCAL etc.
emiratesId	String	25	String represents the Emirates ID of the end user
userName	String	N/A	String represents the user name.
userEmail	String	N/A	String represents the user email ID.
userMobile	Integer	N/A	String represents the user mobile number.
Result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
Notes	String	N/A	String represents ant additional comments or notes
createdDate	Date Tiime	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat, in the <a href="#">getQuesAnswersByBeatId</a> operation)</b>
mobileNo	String	25	Mobile number entered while providing feedback
remarksEn	String	1023	Remarks entered while providing feedback (if language is 'English')

remarksAr	String	1023	Remarks entered while providing feedback (if language is 'Arabic')
-----------	--------	------	--

### 2.1.4 Sample Response

```

<happinessInqByAppResponse
xmlns="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry">

    <remarksAr>Message 4</remarksAr>
  </vote>
</happinessInqByAppResponse>

```

## 2.2 getVotesByServiceDeskpoint

This operation is used to fetch the list of all the Happiness Index votes for the service desk point based search parameters

### 2.2.1 Input Parameters

Tag Name	Type	Length	Description
<b>getVotesByServiceDeskpoint</b>	<b>Object</b>	<b>N/A</b>	<b>Wrap Request Information</b>
serviceCenterName	String	50	String represents the Service Center Name in English.
serviceCounterName	String	50	String represents the Service Counter Name in English.

Date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS

## 2.2.2 Sample Request

```

### 2.2.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
happinessInqByDeskPointResponse	Object	N/A	Wraps all returned Entities information
vote	Array of Vote Object	N/A	Represent the array if vote objects
serviceCenterName	String	50	String represents the Service Center Name in English.
serviceCounterName	String	50	String represents the Service Counter Name in English.
type	String	50	Represents the type of Vote
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
notes	String	N/A	String represents ant additional comments or notes
createdDate	Date Tiime	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat, in the <a href="#">getQuesAnswersByBeatId</a> operation)</b>
mobileNo	String	25	Mobile number entered while providing feedback
remarksEn	String	1023	Remarks entered while providing feedback (if language is 'English')

remarksAr	String	1023	Remarks entered while providing feedback (if language is 'Arabic')
-----------	--------	------	--

## 2.2.4 Sample Response

*Note: The below sample illustrates the Body message*

```
<happinessInqByDeskPointResponse
xmlns="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry">
  <vote>
    <serviceCenterName></serviceCenterName>
    <serviceCounterName></serviceCounterName>
    <type>SERVICE_DESK_POINT</type>
    <result>-1</result>
    <notes></notes>
    <createdDate>2013-01-01T00:26:13.000+04:00</createdDate>
  </vote>
  <vote>
    <serviceCenterName></serviceCenterName>
    <serviceCounterName></serviceCounterName>
    <type>SERVICE_DESK_POINT</type>
    <result>-1</result>
    <notes></notes>
    <createdDate>2013-01-01T00:27:43.000+04:00</createdDate>
    <mobileNo>+971556634332</mobileNo>

    <remarksAr>Message 4</remarksAr>
  </vote>
</happinessInqByDeskPointResponse>
```

## 2.3 getEmployeeVotesByServiceDeskpoint

This operation is used to fetch the list of all the Happiness Index votes for internal users (i.e. employees) for the service desk point based search parameters

### 2.3.1 Input Parameters

Tag Name	Type	Length	Description
<b>getEmployeeVotesByServiceDeskpoint</b>	<b>Object</b>	<b>N/A</b>	<b>Wrap Request Information</b>
serviceCenterName	String	50	String represents the Service Center Name in English.
serviceCounterName	String	50	String represents the Service Counter Name in English.

Date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter “toDate”.  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter “fromDate”.  Format : DD/MM/YYYY HH:MM:SS

### 2.3.2 Sample Request

  </soapenv:Body>
</soapenv:Envelope>

```

### 2.3.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
happinessInqByDeskPointResponse	Object	N/A	Wraps all returned Entities information
vote	Array of Vote Object	N/A	Represent the array if vote objects
serviceCenterName	String	50	String represents the Service Center Name in English.
serviceCounterName	String	50	String represents the Service Counter Name in English.
type	String	50	Represents the type of Vote
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
notes	String	N/A	String represents ant additional comments or notes
createdDate	Date Tiime	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat, in the <a href="#">getQuesAnswersByBeatId</a> operation)</b>
mobileNo	String	25	Mobile number entered while providing feedback
remarksEn	String	1023	Remarks entered while providing feedback (if language is 'English')

remarksAr	String	1023	Remarks entered while providing feedback (if language is 'Arabic')
-----------	--------	------	--

### 2.3.4 Sample Response

*Note: The below sample illustrates the Body message*

```
<happinessInqByDeskPointResponse
xmlns="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry">
  <vote>
    <serviceCenterName></serviceCenterName>
    <serviceCounterName></serviceCounterName>
    <type>SERVICE_DESK_POINT</type>
    <result>-1</result>
    <notes></notes>
    <createdDate>2013-01-01T00:26:13.000+04:00</createdDate>
  </vote>
  <vote>
    <serviceCenterName></serviceCenterName>
    <serviceCounterName></serviceCounterName>
    <type>SERVICE_DESK_POINT</type>
    <result>-1</result>
    <notes></notes>
    <createdDate>2013-01-01T00:27:43.000+04:00</createdDate>
    <mobileNo>+971556634332</mobileNo>
    <remarksEn xsi:nil="true"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"/>
    <remarksAr>Message 4</remarksAr>
  </vote>
</happinessInqByDeskPointResponse>
```

## 2.4 getVotesByTransaction

This operation is used to fetch the list of all the Happiness Index votes for the transaction based search parameters

### 2.4.1 Input Parameters

Tag Name	Type	Length	Description
<b>getVotesByTransaction</b>	<b>Object</b>	<b>N/A</b>	<b>Wrap Request Information</b>
transactionId	String	50	String represents the Transaction ID used for creating the vote

serviceCode	String	50	String represents the Service Code in case the service is registered and enabled in GESS system.
Channel	String	25	String represents the channel of the transaction. For e.g. WEB
result	Integer	1	Integer represents the vote based on user's satisfaction level. Possible values are -1,0,1
date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS

## 2.4.2 Sample Request

### 2.4.3 Output Parameters

Output from the WebService call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>happinessInqByTrxResponse</b>	<b>Object</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
Vote	Array of Vote Object	N/A	Represent the array if vote objects
transactionId	String	50	String represents the Transaction ID used for creating the Vote
gessEnabled	Boolean	N/A	Return true or false based on the enablement of Service in GESS System
serviceCode	String	N/A	String represents the Service Code of the Service in case it is registered and enable in GESS System.
serviceDescription	String	N/A	String represents the Service Description of the Service in case it is registered and enable in GESS System.

channel	String	25	String represents the channel of the transaction. For e.g. WEB
userSource	String	25	String represents the source of the end user. For e.g. MYID, LOCAL etc.
emiratesId	String	25	String represents the Emirates ID of the end user
userName	String	N/A	String represents the user name.
userEmail	String	N/A	String represents the user email ID.
userMobile	Integer	N/A	String represents the user mobile number.
Type	String	50	Represents the type of Vote
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
notes	String	N/A	String represents ant additional comments or notes
createdDate	Date Time	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat)</b>
mobileNo	String	25	Mobile number entered while providing feedback
remarksEn	String	1023	Remarks entered while providing feedback (if language is 'English')
remarksAr	String	1023	Remarks entered while providing feedback (if language is 'Arabic')

## 2.4.4 Sample Response

## 2.5 getVotesByUser

This operation is used to fetch the list of all the Happiness Index votes for the user information based search parameters

### 2.5.1 Input Parameters

Tag Name	Type	Length	Description
<b>getVotesByUser</b>	<b>Objects</b>	<b>N/A</b>	<b>Wrap Request Information</b>
userSource	String	25	String represents the source of the end user. For e.g. MYID, LOCAL etc.

emiratesId	String	25	String represents the Emirates ID of the end user
userName	String	N/A	String represents the user name.
userEmail	String	N/A	String represents the user email ID.
userMobile	Integer	N/A	String represents the user mobile number.
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
Date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS

### 2.5.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>happinessInqByUserResponse</b>	<b>Objects</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
vote	Array of Vote Object	N/A	Represent the array if vote objects
type	String	50	Represents the type of Vote
transactionId	String	50	String represents the Transaction ID used for creating the Vote
gessEnabled	Boolean	N/A	Return true or false based on the enablement of Service in GESS System
serviceCode	String	N/A	String represents the Service Code of the Service in case it is registered and enable in GESS System.
serviceDescription	String	N/A	String represents the Service Description of the Service in case it is

			registered and enable in GESS System.
channel	String	25	String represents the channel of the transaction. For e.g. WEB
applicationId	String	50	String represents the the application ID
applicationType	String	25	String represents the type of Application based on lookup values e.g. SMARTAPP, WEBAPP, DESKTOP etc.
applicationPlatform	String	50	String represents the platform of Application based on lookup values e.g. BLACKBERRY, WINDOWS, ANDROID etc.
applicationUrl	String	N/A	String representing the URL of the Application
applicationVersion	String	N/A	Version of the application (If any)
userSource	String	25	String represents the source of the end user. For e.g. MYID, LOCAL etc.
emiratesId	String	25	String represents the Emirates ID of the end user
userName	String	N/A	String represents the user name.
userEmail	String	N/A	String represents the user email ID.
userMobile	Integer	N/A	String represents the user mobile number.
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
notes	String	N/A	String represents ant additional comments or notes
createdDate	Date Tiime	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat, in the</b>

			<a href="#">getQuesAnswersByBeatId operation</a> )
mobileNo	String	25	Mobile number entered while providing feedback
remarksEn	String	1023	Remarks entered while providing feedback (if language is 'English')
remarksAr	String	1023	Remarks entered while providing feedback (if language is 'Arabic')

## 2.5.4 Sample Response

## 2.6 getAllBeatsByPaging

This operation is used to fetch the all the Happiness Index votes for the department based on search parameters

### 2.6.1 Input Parameters

Tag Name	Type	Length	Description
<b>getAllBeatsByPaging</b>	<b>Objects</b>	<b>N/A</b>	<b>Wrap Request Information</b>
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS
pageNum	Integer	N/A	Represents the page number. (While requesting the paginated response, the pageNum parameter would take values 1,2,3,4 and so on subsequent invocations).
rowSize	Integer	N/A	Represents the desired size (number of rows) in the response returned for each invocation. The value of 'rowSize' should be unchanged during multiple invocations for the same request.  <b>Example:</b>  If rowSize is 500 and a total of 1354 votes satisfy the search parameters:

			<ul style="list-style-type: none"> <li>• 500 votes would be returned for the first paginated response (pageNum = 1),</li> <li>• 500 votes would be returned for the second paginated response (pageNum = 2).</li> <li>• 354 records would be returned for the 3<sup>rd</sup> paginated response (pageNum =3)</li> </ul>
--	--	--	---

## 2.6.2 Sample Request

</soapenv:Envelope>

```

## 2.6.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>happinessAllBeatsResponse</b>	<b>Objects</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
vote	Array of Vote Object	N/A	Represent the array if vote objects
type	String	50	Represents the type of Vote
transactionId	String	50	String represents the Transaction ID used for creating the Vote
serviceCode	String	N/A	String represents the Service Code of the Service in case it is registered and enable in GESS System.
serviceDescription	String	N/A	String represents the Service Description of the Service in case it is registered and enable in GESS System.
applicationId	String	50	String represents the the application ID
applicationType	String	25	String represents the type of Application based on lookup values e.g. SMARTAPP, WEBAPP, DESKTOP etc.
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
createdDate	Date Time	N/A	Date of creation of Vote in UTC format
beatId	Integer	N/A	Unique identifier for the beat. <b>(BeatId would be used to query the questions/answers associated with this beat, in the <a href="#">getQuesAnswersByBeatId</a> operation)</b>
totalRecords	Integer	N/A	The total number of records (votes) which would be returned by this operation, after calling all the subsequent invocations.  Note that this figure is indicative and may show variations, especially for the current day. For calculation purposes,

			it's recommended to use the 'getBeatSummary' operation to get the best estimate.
rowNum	Integer	N/A	The sequence number of the row in the overall consolidated response across subsequent paginated responses.

## 2.6.4 Sample Response

```

<happinessAllBeatsResponse
xmlns="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry"
>
  <vote>

    <totalRecords>83</totalRecords>
    <rowNum>2</rowNum>
  </vote>
</happinessAllBeatsResponse>

```

## 2.7 getBeatSummary

This operation is used to fetch the summary of the votes for the department based on search parameters.

This operation returns the following statistics:

- Number of Application Votes which satisfy the search parameters.
- Number of Transaction Votes which satisfy the search parameters.
- Number of Service Desk Point Votes which satisfy the search parameters.
- Grant total of all the above votes.

### 2.7.1 Input Parameters

Tag Name	Type	Length	Description
<b>getBeatSummary</b>	<b>Objects</b>	<b>N/A</b>	<b>Wrap Request Information</b>
result	Integer	1	Integer lookup representing the happiness indicator. Possible values are -1,0,1
date	Date	N/A	Represents the search filter based on date to inquire the votes on a particular date. Format : DD/MM/YYYY
fromDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "toDate".  Format : DD/MM/YYYY HH:MM:SS
toDate	Date Time	N/A	Represents the search filter based on date time to inquire the votes in a particular date time range. This parameter should be used along with the parameter "fromDate".  Format : DD/MM/YYYY HH:MM:SS

### 2.7.2 Sample Request

```

<soapenv:Envelope
xmlns:inq="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry" xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">

</soapenv:Body>
</soapenv:Envelope>

```

### 2.7.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>happinessBeatSummaryResponse</b>	<b>Objects</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
vote	Array of Vote Object	N/A	Represent the array of vote summary for each of the types of votes. Possible values are:  <b>1) APPLICATION</b> <b>2) TRANSACTION</b> <b>3) SERVICE_DESK_POINT</b> <b>4) GRAND_TOTAL</b> (rollup column containing the sum total of all the votes)
type	String	50	Represents the type of Vote
totalBeats	Integer	N/A	Total number of votes for this category.

### 2.7.4 Sample Response

```

<happinessBeatSummaryResponse
xmlns="https://api.ga.dubai.gov.ae/secure/dsg/happiness/1.0.0/inquiry"
>
    <vote>
        <type>APPLICATION</type>
        <totalBeats>49</totalBeats>
    </vote>
    <vote>
        <type>TRANSACTION</type>
        <totalBeats>13</totalBeats>
    </vote>
    <vote>
        <type>SERVICE_DESK_POINT</type>
        <totalBeats>35</totalBeats>
    </vote>
    <vote>
        <type>GRAND_TOTAL</type>
        <totalBeats>97</totalBeats>
    </vote>
</happinessBeatSummaryResponse>

```

## 2.8 getQuesAnswersByBeatId

**Note:** This operation would use the ‘HappinessQuestionsInquiry’ service. Please refer to the section 3 ‘Access Information’ for the URL.

This operation is used to fetch all the questions / answers associated with a beat identified by the ‘beat id’ passed as input.

### 2.8.1 Input Parameters

Tag Name	Type	Length	Description
beatId	Integer	10	The unique identifier for a beat (vote). For getting the beatId, please use one of the operations in the previous sections: <ul style="list-style-type: none"> <li><a href="#">getVotesByApplication</a></li> <li><a href="#">getVotesByServiceDeskpoint</a></li> <li><a href="#">getVotesByTransaction</a></li> <li><a href="#">getVotesByUser</a></li> </ul>

### 2.8.2 Sample Request

```

<soapenv:Envelope

### 2.8.3 Output Parameters

Output from the Webservice call to this operation returns XML data. The details of the XML are as follows:

Tag Name	Type	Length	Description
<b>quesAnswersByBeatIdResponse</b>	<b>Objects</b>	<b>N/A</b>	<b>Wraps all returned Entities information</b>
vote	Array of Vote Object	N/A	Represent the array if vote objects
nameEN	String	N/A	Name of the question item in English
nameAR	String	N/A	Name of the question item in Arabic
selectedAnswer	String	N/A	Answer selected by the user

## 2.8.4 Sample Response

```

<quesAnswersByBeatIdResponse
xmlns="https://api.qa.dubai.gov.ae/secure/dsg/happiness/1.0.0/quesinquiry">
  <vote>
    <nameEN>Front desk staff service</nameEN>
    <nameAR>تجربتك مع موظف الخدمة</nameAR>
    <selectedAnswer>UNHAPPY</selectedAnswer>
  </vote>
  <vote>
    <nameEN>Speed and accuracy of service</nameEN>
    <nameAR>سرعة ودقة تقديم الخدمة</nameAR>
    <selectedAnswer>NEUTRAL</selectedAnswer>
  </vote>
  <vote>
    <nameEN>Service center environment</nameEN>
    <nameAR>بيئة مركز الخدمة</nameAR>
    <selectedAnswer xsi:nil="true"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"/>
  </vote>
</quesAnswersByBeatIdResponse>

```

## 3 Access Information

### 3.1 QA Environment

#### 3.1.1 URL

Inquiry Endpoint URL	<a href="https://api.qa.dubai.gov.ae/services/HappinessBeatInquirySOAPV4">https://api.qa.dubai.gov.ae/services/HappinessBeatInquirySOAPV4</a>
Inquiry WSDL URL	<a href="https://api.qa.dubai.gov.ae/services/HappinessBeatInquirySOAPV4?wsdl">https://api.qa.dubai.gov.ae/services/HappinessBeatInquirySOAPV4?wsdl</a>
Questions Endpoint URL	<a href="https://api.qa.dubai.gov.ae/services/HappinessQuestionsInquiry">https://api.qa.dubai.gov.ae/services/HappinessQuestionsInquiry</a>
Questions WSDL URL	<a href="https://api.qa.dubai.gov.ae/services/HappinessQuestionsInquiry?wsdl">https://api.qa.dubai.gov.ae/services/HappinessQuestionsInquiry?wsdl</a>

### 3.1.2 Certificate

QA\_Certificate.cer

### 3.1.3 Server IP

Public IP: 213.42.56.51

### 3.1.4 Port

Port: 443

## 3.2 Production Environment

### 3.2.1 URL

Inquiry Endpoint URL	<a href="https://api.dubai.gov.ae/services/HappinessBeatInquirySOAPV4">https://api.dubai.gov.ae/services/HappinessBeatInquirySOAPV4</a>
Inquiry WSDL URL	<a href="https://api.dubai.gov.ae/services/HappinessBeatInquirySOAPV4?wsdl">https://api.dubai.gov.ae/services/HappinessBeatInquirySOAPV4?wsdl</a>
Questions Endpoint URL	<a href="https://api.dubai.gov.ae/services/HappinessQuestionsInquiry">https://api.dubai.gov.ae/services/HappinessQuestionsInquiry</a>
Questions WSDL URL	<a href="https://api.dubai.gov.ae/services/HappinessQuestionsInquiry?wsdl">https://api.dubai.gov.ae/services/HappinessQuestionsInquiry?wsdl</a>

### 3.2.2 Certificate

PROD\_Certificate.cer

### 3.2.3 Server IP

Public IP: 213.42.48.30

### 3.2.4 Port

Port : 443

## 4 Security Requirements

---

Government entities which intended to use this WebService must fulfill the following security requirements:

### 4.1 SSL communication through HTTPS

Communication to this WebService is only allowed through HTTPS.

### 4.2 WS-Security Username and Password:

Clients must support WS-Security by sending authentication information along with each request to this WebService (i.e. username and password).

For a sample request with authentication information please see the following attached file.

sampleAuthenticatio  
nRequest.xml

## 5 Assumptions

---

DSG will be responsible for the following:

- Providing technical specification guides “this document”.
- Providing authentication information “Upon Request”.
- Providing Technical Assistance during the integration.
- Ensure the availability of the WebService.

DEG shall **NOT** be responsible for the following:

- Doing any development activities (i.e. implementers will be responsible of developing their clients for the WebService).

## 6 Appendices

### 6.1.1 Appendix A: WSDL file.

Below is the WSDL file that should be used as a reference to generate clients

**HappinessBeatInquirySOAPV4.wsdl**
